

Building resilient health systems to deliver integrated, person-centred NCD and HIV care (Case study 3)

Building resilient health systems to deliver integrated, person-centred NCD and HIV care (Case study 3)

Langue Undefined

This case study focuses on efforts to integrate NCD and HIV prevention, treatment and care services to improve quality and reach of person-centred NCD care. Other case studies cover NCDs in humanitarian settings and the NCD response in Ethiopia.

Extended Description:

In many LMICs, one of the most significant co-morbidities is that of HIV and NCDs. It is estimated that by 2035 nearly three-quarters of people living with HIV worldwide will also be living with one or more NCD¹. Responding to this rising prevalence of NCDs among people living with HIV requires investment in robust, resilient, equitable and publicly funded health systems to deliver person-centred and context-specific integrated services for HIV, NCDs and a range of other health concerns, as was clearly recognised during the 2021 High-Level Meeting on AIDS.

While there are increasing efforts to deliver this kind of care, especially at primary health care level, critical health system challenges need to be overcome to fully realise the aims of the Political Declaration and make greater progress towards SDG 3.4. Building resilient health systems for HIV and NCD diagnosis, treatment and care requires an integrated approach that strengthens the health workforce, improves the capture and use of combined HIV and NCD data, and expands access to essential diagnostics, medicines and monitoring equipment for NCDs. This case study explores efforts being undertaken to achieve this.

This case study is part of a series exploring the importance of strong health systems for the achievement of the Sustainable Development Goal (SDG) target 3.4 to reduce premature mortality from NCDs by one-third by 2030.

We also invite you to explore the [first case study on NCDs in humanitarian settings](#) [2] and the [second case study on NCDs and primary healthcare](#) [3].
