## How safe is your food?

Language English

The great majority of people will experience a food or water borne disease at some point in their lives. This highlights the importance of making sure the food we eat is not contaminated with potentially harmful bacteria, parasites, viruses, toxins and chemicals.

***“Food safety: From farm to plate, make food safe”*** is the theme of World Health Day 2015, on 7th April. The day focuses on demonstrating the importance of food safety along the whole length of the food chain in a globalised world, from production and transport, to preparation and consumption.
